Question #191

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution. After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have an Azure subscription named Subscription1. You sign in to the Azure portal and create a resource group named RG1.

From Azure documentation, you have the following command that creates a virtual machine named VM1. az vm create --resource-group RG1 --name VM1 --image UbuntuLTS --generate-ssh-keys

You need to create VM1 in Subscription1 by using the command.

Solution: From the Azure portal, launch Azure Cloud Shell and select Bash. Run the command in Cloud Shell.
Does this meet the goal?

A Yes **Most Voted**

B No

Correct Answer:
A
The command can be run in the Azure Cloud Shell.
The Azure Cloud Shell is a free interactive shell. It has common Azure tools preinstalled and configured to use with your account.
To open the Cloud Shell, just select Try it from the upper right corner of a code block. You can also launch Cloud Shell in a separate browser tab by going to https://shell.azure.com/bash.

Question 15 Share

Question #192

Your company has several business units.
Each business unit requires 20 different Azure resources for daily operation. All the business units require the same

type of Azure resources.
You need to recommend a solution to automate the creation of the Azure resources.
What should you include in the recommendations?

A Azure Resource Manager templates **Most Voted**

B virtual machine scale sets

C the Azure API Management service

D management groups

Correct Answer:
A
You can use Azure Resource Manager templates to automate the creation of the Azure resources.
Deploying resource through templates is known as 'Infrastructure as code'.
To implement infrastructure as code for your Azure solutions, use Azure Resource Manager templates. The template is a JavaScript Object Notation (JSON) file that defines the infrastructure and configuration for your project. The template uses declarative syntax, which lets you state what you intend to deploy without having to write the sequence of programming commands to create it. In the template, you specify the resources to deploy and the properties for those resources.

Question #194

What can you use to identify underutilized or unused Azure virtual machines?

A Azure Advisor **Most Voted**

B Azure Cost Management + Billing

C Azure reservations

D Azure Policy

Correct Answer:
A
Azure Advisor helps you optimize and reduce your overall Azure spend by identifying idle and underutilized resources. You can get cost recommendations from the Cost tab on the Advisor dashboard.

Question 16 Share

Question #195

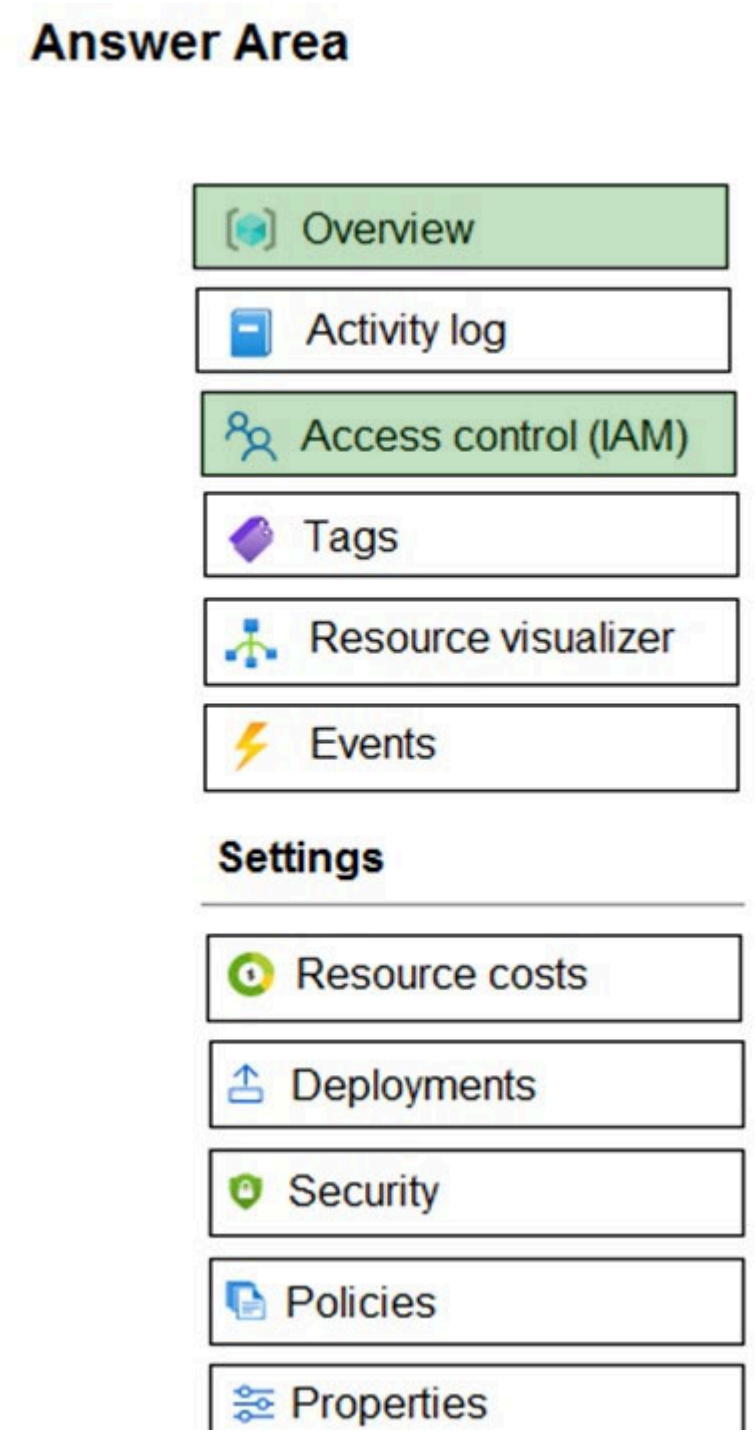

HOTSPOT -
Which node in the Azure portal should you use to assign a user the Reader role for a resource group? To answer, select the node in the answer area.
NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area

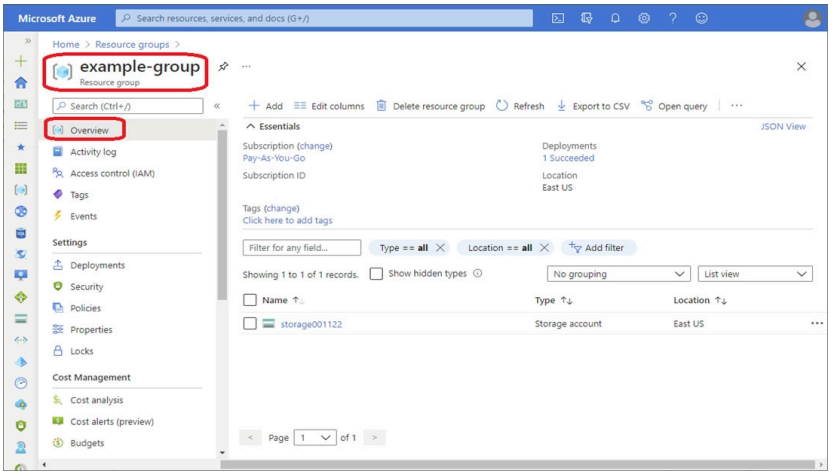

Correct Answer:

Box 1: Overview -
When you assign roles, you must specify a scope. Scope is the set of resources the access applies to. In Azure, you can specify a scope at four levels from broad to narrow: management group, subscription, resource group, and resource.

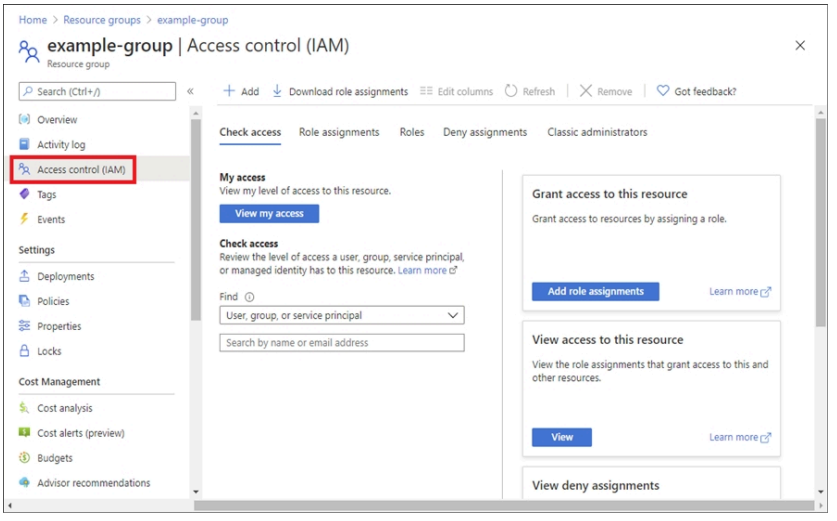

1. Sign in to the Azure portal.
2. In the Search box at the top, search for the scope you want to grant access to. For example, search for Management groups, Subscriptions, Resource groups, or a specific resource.
3. Click the specific resource for that scope.
4. The following shows an example resource group.

Box 2: Access control (IAM)
Access control (IAM) is the page that you typically use to assign roles to grant access to Azure resources. It's also known as identity and access management
(IAM) and appears in several locations in the Azure portal.

1. Click Access control (IAM).

The following shows an example of the Access control (IAM) page for a resource group.

2. Click the Role assignments tab to view the role assignments at this scope.
3. Click Add > Add role assignment.
If you don't have permissions to assign roles, the Add role assignment option will be disabled.
4. The Add role assignment page opens.

Question #197

HOTSPOT -
For each of the following statements, select Yes if the statement is true. Otherwise, select No.
NOTE: Each correct selection is worth one point.
Hot Area:

Answer Area

Statements	Yes	No
You must have internet connectivity to manage cloud services.	○	○
You must install a management app to manage cloud services.	○	○
You can manage cloud services from any modern web browser.	○	○

Correct Answer:

Answer Area

Statements	Yes	No
You must have internet connectivity to manage cloud services.	○	○
You must install a management app to manage cloud services.	○	○
You can manage cloud services from any modern web browser.	○	○

Box 1: Yes -

Box 2: No -
Cloud services can be managed through https://portal.azure.com/
In the Cloud Services area of the Azure portal, you can:
Update a service role or a deployment.
Promote a staged deployment to production.
Link resources to your cloud service so that you can see the resource dependencies and scale the resources together.
Delete a cloud service or a deployment.

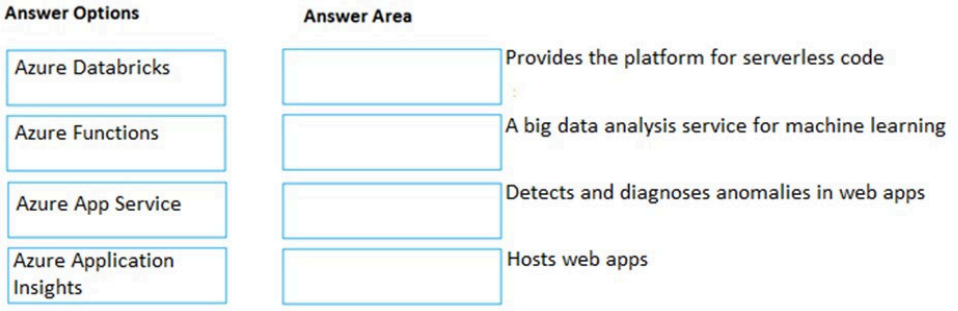

Box 3: Yes -

Question #198

DRAG DROP -
Match the Azure service to the correct definition.
Instructions: To answer, drag the appropriate Azure service from the column on the left to its description on the right. Each service may be used once, more than once, or not at all.
NOTE: Each correct selection is worth one point.
Select and Place:

Correct Answer:

Box 1:
Azure Functions provides the platform for serverless code.
Azure Functions is a serverless compute service that lets you run event-triggered code without having to explicitly provision or manage infrastructure.
Box 2:
Azure Databricks is a big analysis service for machine learning.
Azure Databricks is an Apache Spark-based analytics platform. The platform consists of several components including 'MLib'. Mlib is a Machine

Learning library consisting of common learning algorithms and utilities, including classification, regression, clustering, collaborative filtering, dimensionality reduction, as well as underlying optimization primitives.
Box 3:
Azure Application Insights detects and diagnoses anomalies in web apps.
Application Insights, a feature of Azure Monitor, is an extensible Application Performance Management (APM) service for developers and DevOps professionals.
Use it to monitor your live applications. It will automatically detect performance anomalies, and includes powerful analytics tools to help you diagnose issues and to understand what users actually do with your app.
Box 4:
Azure App Service hosts web apps.
Azure App Service is an HTTP-based service for hosting web applications, REST APIs, and mobile back ends. You can develop in your favorite language, be it
.NET, .NET Core, Java, Ruby, Node.js, PHP, or Python. Applications run and scale with ease on both Windows and Linux-based environments.

Question #199

A team of developers at your company plans to deploy, and then remove, 50 customized virtual machines each week. Thirty of the virtual machines run Windows Server 2016 and 20 of the virtual machines run Ubuntu Linux.
You need to recommend which Azure service will minimize the administrative effort required to deploy and remove the virtual machines.
What should you recommend?

A Azure Reserved Virtual Machines (VM) Instances

B Azure virtual machine scale sets

C Azure DevTest Labs **Most Voted**

D Microsoft Managed Desktop

Correct Answer:
C
DevTest Labs creates labs consisting of pre-configured bases or Azure Resource Manager templates.
By using DevTest Labs, you can test the latest versions of your applications by doing the following

tasks:
☞ Quickly provision Windows and Linux environments by using reusable templates and artifacts.
☞ Easily integrate your deployment pipeline with DevTest Labs to provision on-demand environments.
☞ Scale up your load testing by provisioning multiple test agents and create pre-provisioned environments for training and demos.
