Question #121

DRAG DROP -
Match the Azure Services service to the correct description.
Instructions: To answer, drag the appropriate service from the column on the left to its description on the right. Each service may be used once, more than once, or not at all.
NOTE: Each correct selection is worth one point.
Select and Place:

Services	Answer Area	
Azure Sphere IoT Central IoT Hub		A managed service that provides bidirectional communication between IoT devices and Azure
		A fully managed software as a service (SaaS) solution to connect, monitor, and manage IoT devices at scale
		A software and hardware solution that provides communication and security features for IoT devices

Correct Answer:

Services	Answer Area	
	IoT Hub	A managed service that provides bidirectional communication between IoT devices and Azure
	IoT Central	A fully managed software as a service (SaaS) solution to connect, monitor, and manage IoT devices at scale
	Azure Sphere	A software and hardware solution that provides communication and security features for IoT devices

Question #122

HOTSPOT -
For each of the following statements, select Yes if the statement is true. Otherwise, select No.
NOTE: Each correct selection is worth one point.
Hot Area:

Answer Area

Statements	Yes	No
A Windows Virtual Desktop session host can run Windows 10 only.	○	○
A Windows Virtual Desktop host pool that includes 20 session hosts supports a maximum of 20 simultaneous user connections.	○	○
Windows Virtual Desktop supports desktop and app virtualization.	○	○

Correct Answer:

Answer Area

Statements	Yes	No
A Windows Virtual Desktop session host can run Windows 10 only.	○	●
A Windows Virtual Desktop host pool that includes 20 session hosts supports a maximum of 20 simultaneous user connections.	○	●
Windows Virtual Desktop supports desktop and app virtualization.	●	○

Question #123

HOTSPOT -
To complete the sentence, select the appropriate option in the answer area.
Hot Area:

Answer Area

[▼] can calculate cost savings due to reduced electricity consumption as a result of migrating on-premises Microsoft SQL servers to Azure.

- The Azure Migrate: Server Assessment tool
- The Azure Total Cost of Ownership (TCO) calculator
- The Database Migration Assistant
- The pricing calculator in Azure

Correct Answer:

Answer Area

The Azure Migrate: Server Assessment tool The Azure Total Cost of Ownership (TCO) calculator The Database Migration Assistant The pricing calculator in Azure	can calculate cost savings due to reduced electricity consumption as a result of migrating on-premises Microsoft SQL servers to Azure.

Question #124

HOTSPOT -
For each of the following statements, select Yes if the statement is true. Otherwise, select No.
NOTE: Each correct selection is worth one point.
Hot Area:

Answer Area

Statements	Yes	No
You can use Availability Zones in Azure to protect Azure virtual machines from a datacenter failure.	○	○
You can use Availability Zones in Azure to protect Azure virtual machines from a region failure.	○	○
You can use Availability Zones in Azure to protect Azure managed disks from a datacenter failure.	○	○

Correct Answer:

Answer Area

Statements	Yes	No
You can use Availability Zones in Azure to protect Azure virtual machines from a datacenter failure.	◯	◯
You can use Availability Zones in Azure to protect Azure virtual machines from a region failure.	◯	◯
You can use Availability Zones in Azure to protect Azure managed disks from a datacenter failure.	◯	◯

Availability zones expand the level of control you have to maintain the availability of the applications and data on your VMs. Availability Zones are unique physical locations within an Azure region. Each zone is made up of one or more datacenters equipped with independent power, cooling, and networking. To ensure resiliency, there are a minimum of three separate zones in all enabled regions. The physical separation of Availability Zones within a region protects applications and data from datacenter failures.

With Availability Zones, Azure offers industry best 99.99% VM uptime SLA. By architecting your solutions to use replicated VMs in zones, you can protect your applications and data from the loss of a datacenter. If one zone is compromised, then replicated apps and data are instantly available in another zone.

Question #125

HOTSPOT -
For each of the following statements, select Yes if the statement is true. Otherwise, select No.
NOTE: Each correct selection is worth one point.
Hot Area:

Answer Area

Statements	Yes	No
An Azure subscription can have multiple account administrators	○	○
An Azure subscription can be managed by using a Microsoft account only	○	○
An Azure resource group can contain multiple Azure subscriptions	○	○

Correct Answer:

Answer Area

Statements	Yes	No
An Azure subscription can have multiple account administrators	○	○
An Azure subscription can be managed by using a Microsoft account only	○	○
An Azure resource group can contain multiple Azure subscriptions	○	○

Box 1: No -
A subscription can have multiple administrators, but there can only be one account administrator.

Box 3: No -
A subscription can contain multiple resource groups

but a resource group can only belong to one subscription. Resource groups can contain multiple resources.

Question #127

You plan to deploy several Azure virtual machines.
You need to ensure that the services running on the virtual machines remain available if a single data center fails.
What are two possible solutions? Each correct answer presents a complete solution.

A Deploy the virtual machines to two or more availability zones. **Most Voted**

B Deploy the virtual machines to two or more resource groups.

C Deploy the virtual machines to a scale set.

D Deploy the virtual machines to two or more regions. **Most Voted**

Correct Answer:
AD
Reference:
https://docs.microsoft.com/en-us/azure/virtual-machine-scale-sets/overview
https://docs.microsoft.com/en-us/azure/virtual-machines/windows/regions

Question 19 Share

Question #128

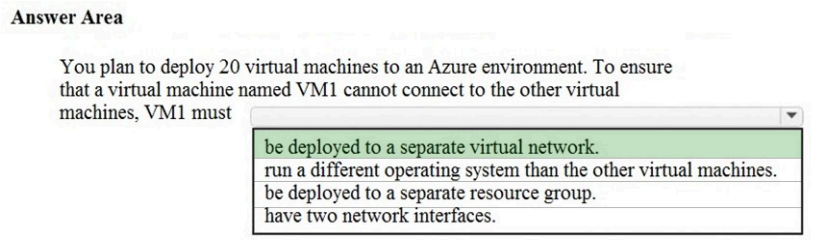

HOTSPOT -
To complete the sentence, select the appropriate option in the answer area.
Hot Area:

Answer Area

You plan to deploy 20 virtual machines to an Azure environment. To ensure that a virtual machine named VM1 cannot connect to the other virtual machines, VM1 must

- be deployed to a separate virtual network.
- run a different operating system than the other virtual machines.
- be deployed to a separate resource group.
- have two network interfaces.

Correct Answer:

Azure automatically routes traffic between subnets in a virtual network. Therefore, all virtual machines in a virtual network can connect to the other virtual machines in the same virtual network. Even if the virtual machines are on separate subnets within the virtual network, they can still communicate with each other.

To ensure that a virtual machine cannot connect to the other virtual machines, the virtual machine must be deployed to a separate virtual network.

Question #130

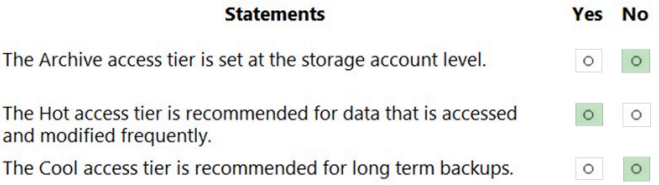

HOTSPOT -
For each of the following statements, select Yes if the statement is true. Otherwise, select No.
NOTE: Each correct selection is worth one point.
Hot Area:

Answer Area

Statements	Yes	No
The Archive access tier is set at the storage account level.	○	○
The Hot access tier is recommended for data that is accessed and modified frequently.	○	○
The Cool access tier is recommended for long term backups.	○	○

Correct Answer:

Answer Area

Statements	Yes	No
The Archive access tier is set at the storage account level.	○	○
The Hot access tier is recommended for data that is accessed and modified frequently.	○	○
The Cool access tier is recommended for long term backups.	○	○

Box 2: Yes -
Usage scenarios for the hot access tier include:
☞ Data that is in active use or is expected to be read from and written to frequently
☞ Data that is staged for processing and eventual migration to the cool access tier

Box 3: No -
Usage scenarios for the cool access tier include:
☞ Short-term backup and disaster recovery
☞ Older data not used frequently but expected to be available immediately when accessed
Large data sets that need to be stored cost effectively, while more data is being gathered for future processing
▪
