Question 15 Share

Question #141

Your company has an Azure subscription that contains resources in several regions.
You need to ensure that administrators can only create resources in those regions.
What should you use?

A a read-only lock

B an Azure policy Most Voted

C a management group

D a reservation

Correct Answer:
B

Hide Answer

Question 14 Share

Question #142

HOTSPOT -
Select the answer that correctly completes the sentence.
Hot Area:

Answer Area

An Azure region ▼
- contains one or more data centers that are connected by using a low-latency network.
- is found in each country where Microsoft has a subsidiary office.
- can be found in every country in Europe and the Americas only.
- contains one or more data centers that are connected by using a high-latency network.

Correct Answer:

Answer Area

An Azure region ▼
- contains one or more data centers that are connected by using a low-latency network.
- is found in each country where Microsoft has a subsidiary office.
- can be found in every country in Europe and the Americas only.
- contains one or more data centers that are connected by using a high-latency network.

Box: contains one or more data centers that are connected by using a low-latency network.
Each Azure region features datacenters deployed within a latency-defined perimeter. They're connected through a dedicated regional low-latency network. This design ensures that Azure services within any region offer the best possible

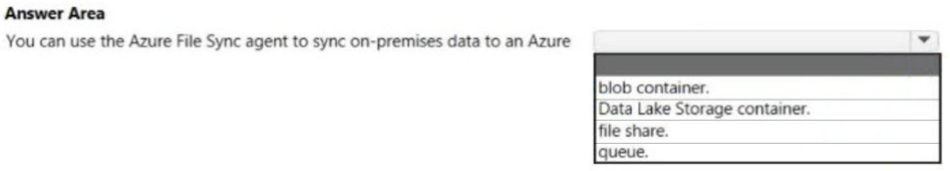

performance and security.

Question 10 Share

Question #144

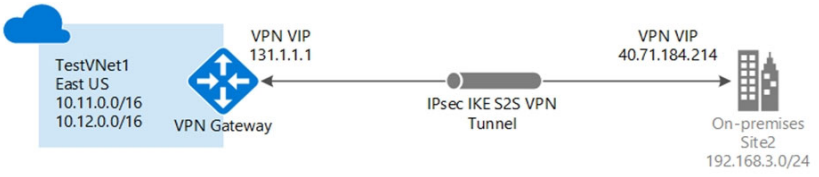

What is the function of a Site-to-Site VPN?

A provides a secure connection between a computer on a public network and the corporate network

B provides a dedicated private connection to Azure that does NOT travel over the internet

C provides a connection from an on-premises VPN device to an Azure VPN gateway **Most Voted**

Correct Answer:
C
A Site-to-Site VPN gateway connection is used to connect your on-premises network to an Azure virtual network over an IPsec/IKE (IKEv1 or IKEv2) VPN tunnel.
This type of connection requires a VPN device located on-premises that has an externally facing public IP address assigned to it.
Example:

Question #145

DRAG DROP -
Match the cloud service models to the appropriate offerings.
To answer, drag the appropriate model from the column on the left to its offering on the right. Each model may be used once, more than once, or not at all.
NOTE: Each correct match is worth one point.
Select and Place:

Correct Answer:

Box 1: Platform as a service (PaaS)
Azure App Service is a fully managed platform for

building web applications.
Platform as a service (PaaS) is a complete development and deployment environment in the cloud, with resources that enable you to deliver everything from simple cloud-based apps to sophisticated, cloud-enabled enterprise applications.
Box 2: Infrastructure as a service (IaaS)
Windows Azure Virtual Machines, an Infrastructure-as-a-Service (IaaS) offering in Windows Azure, was released back in 2012.
Box 3: Software as a service (SaaS)
Dynamics 365 is a set of interconnected, modular Software-as-a-Service (SaaS) applications and services designed to both transform and enable your core customers, employees, and business activities.

Question #146

DRAG DROP -
Match the cloud service models to the appropriate solutions.

To answer, drag the appropriate cloud service model from the column on the left to its solution on the right Each cloud service model may be used once, more than once, or not at all.
NOTE: Each correct match is worth one point.
Select and Place:

Correct Answer:

Box 1: Infrastructure as a service (IaaS)
Azure Files is a simple, secure, and serverless enterprise-grade cloud file shares.
Infrastructure as a service (IaaS) is a type of cloud computing service that offers essential compute, storage, and networking resources on demand, on a pay-as- you-go basis.
Box 2: Software as a service (SaaS)
Dynamics 365 is a set of interconnected, modular Software-as-a-Service (SaaS) applications and services designed to both transform and enable your core customers, employees, and business activities. It includes Dynamics 365 Finance: use the guided, rules-based chart of accounts and no-code configuration service to simplify regulatory reporting, electronic invoicing, and global payments.
Box 3: Platform as a service (PaaS)

Platform as a service (PaaS) is a complete development and deployment environment in the cloud, with resources that enable you to deliver everything from simple cloud-based apps to sophisticated, cloud-enabled enterprise applications.

Question 13 Share

Question #147

You need to manage containers.
Which two services can you use? Each correct answer presents a complete solution.
NOTE: Each correct selection is worth one point.

A Azure Virtual Desktop

B Azure virtual machines

C Azure Functions

D Azure Container Instances Most Voted

E Azure Kubernetes Service (AKS) Most Voted

Correct Answer:
DE
Run Docker containers on-demand in a managed, serverless Azure environment. Azure Container Instances is a solution for any scenario that can operate in isolated containers, without orchestration. Run event-driven applications, quickly deploy from your container development pipelines, and run data processing and build jobs.
You can manage containers at scale with a fully managed Kubernetes container management and orchestration service that integrates with Azure Active
Directory.
Azure Kubernetes Service is a robust and cost-effective container orchestration service that helps you to deploy and manage containerized applications in seconds where additional resources are assigned automatically without the headache of managing additional servers.

Question #148

HOTSPOT -
To complete the sentence, select the appropriate option in the answer area.
Hot Area:
Answer Area

When you need to delegate permissions to several Azure virtual machines simultaneously, you must deploy the Azure virtual machines

- to the same Azure region.
- by using the same Azure Resource Manager template.
- to the same resource group.
- to the same availability zone.

Correct Answer:

Answer Area

When you need to delegate permissions to several Azure virtual machines simultaneously, you must deploy the Azure virtual machines

- to the same Azure region.
- by using the same Azure Resource Manager template.
- **to the same resource group.**
- to the same availability zone.

A resource group is a logical container for Azure resources. Resource groups make the management of Azure resources easier.
With a resource group, you can allow a user to manage all resources in the resource group, such as virtual machines, websites, and subnets. The permissions you apply to the resource group apply to all resources contained in the resource group.
Reference:
https://docs.microsoft.com/en-us/azure/azure-resource-manager/management/overview#resource-groups
https://docs.microsoft.com/en-us/azure/role-based-access-control/overview

Question 15 Share

Question #149

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution. After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.
You plan to deploy several Azure virtual machines.
You need to ensure that the services running on the virtual machines are available if a single data center fails.
Solution: You deploy the virtual machines to two or more availability zones.
Does this meet the goal?

A Yes Most Voted

B No

Correct Answer:
A
Availability zones expand the level of control you have to maintain the availability of the applications and data on your VMs. An Availability Zone is a physically separate zone, within an Azure region. There are three Availability Zones per supported Azure region.
Each Availability Zone has a distinct power source, network, and cooling. By architecting your solutions to use replicated VMs in zones, you can protect

your apps and data from the loss of a datacenter. If one zone is compromised, then replicated apps and data are instantly available in another zone.
Reference:
https://docs.microsoft.com/en-us/azure/virtual-machine-scale-sets/availability

Question 28 Share

Question #150

This question requires that you evaluate the underlined text to determine if it is correct.
One of the benefits of Azure SQL Data Warehouse is that high availability is built into the platform.
Instructions: Review the underlined text. If it makes the statement correct, select `No change is needed`. If the statement is incorrect, select the answer choice that makes the statement correct.

A No change is needed

B automatic scaling Most Voted

C data compression

D versioning

Correct Answer:
A
Azure Data Warehouse (now known as Azure Synapse Analytics) is a PaaS offering from Microsoft. As with all PaaS services from Microsoft, SQL Data
Warehouse offers an availability SLA of 99.9%. Microsoft can offer 99.9% availability because it has high availability features built into the platform.
