Question #151

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.
After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.
You plan to deploy several Azure virtual machines.
You need to ensure that the services running on the virtual machines are available if a single data center fails.
Solution: You deploy the virtual machines to two or more regions.
Does this meet the goal?

A Yes Most Voted

B No

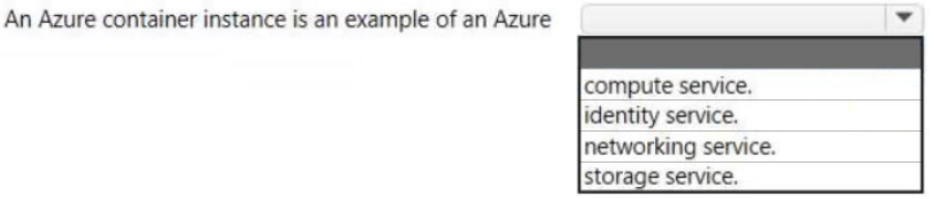

Correct Answer:
A
By deploying the virtual machines to two or more regions, you are deploying the virtual machines to multiple datacenters. This will ensure that the services running on the virtual machines are available if a single data center fails.
Azure operates in multiple datacenters around the world. These datacenters are grouped in to geographic regions, giving you flexibility in choosing where to build your applications.
You create Azure resources in defined geographic regions like 'West US', 'North Europe', or 'Southeast Asia'. You can review the list of regions and their locations.
Within each region, multiple datacenters exist to provide for redundancy and availability.

Question #152

HOTSPOT -
Select the answer that correctly completes the sentence.
Hot Area:

Correct Answer:

The term compute refers to the hosting model for the computing resources that your application runs on. For Azure this include:
Azure Container Instances. The fastest and simplest way to run a container in Azure, without having to provision any virtual machines and without having to adopt a higher-level service.
Note, and also the following:
Azure App Service. A managed service for hosting web apps, mobile app back ends, RESTful APIs, or automated business processes.
Azure Spring Cloud. A managed service designed and optimized for hosting Spring Boot apps.
Azure Kubernetes Service (AKS). A managed Kubernetes service for running containerized applications.
Azure Batch. A managed service for running large-scale parallel and high-performance computing (HPC) applications
Azure Functions. A managed FaaS service.
Azure Service Fabric. A distributed systems

platform that can run in many environments, including Azure or on premises.
Azure Virtual machines. Deploy and manage VMs inside an Azure virtual network.
Azure Container Apps. Deploy and manage VMs inside an Azure virtual network.

Question 27 Share

Question #153

At which OSI layer does ExpressRoute operate?

A Layer 2

B Layer 3 Most Voted

C Layer 5

D Layer 7

Correct Answer:
B
ExpressRoute circuit. A layer 2 or layer 3 circuit

supplied by the connectivity provider that joins the on-premises network with Azure through the edge routers. The circuit uses the hardware infrastructure managed by the connectivity provider.
In OSI terms, you start from layer 2â€¦ The â€Network Service Providerâ€ concept was a managed concept, where you got a layer 3 solution (in OSI terms). The telecom provider took care of all the complexity for you.

Question #154

HOTSPOT -
Select the answer that correctly completes the sentence.
Hot Area:

Application Insights is a feature of

- Azure Advisor.
- Azure Application Gateway.
- Azure Arc.
- Azure Monitor.

Correct Answer:

Application Insights is a feature of Azure Monitor that provides extensible application performance management (APM) and monitoring for live web apps.
Reference:
https://docs.microsoft.com/en-us/azure/azure-monitor/app/app-insights-overview

Question #155

HOTSPOT -
For each of the following statements, select Yes if the statement is true. Otherwise, select No.
NOTE: Each correct selection is worth one point.
Hot Area:

Answer Area

Statements	Yes	No
Azure resources can only access other resources in the same resource group.	○	○
If you delete a resource group, all the resources in the resource group will be deleted.	○	○
A resource group can contain resources from multiple Azure regions.	○	○

Correct Answer:

Answer Area

Statements	Yes	No
Azure resources can only access other resources in the same resource group.	○	●
If you delete a resource group, all the resources in the resource group will be deleted.	●	○
A resource group can contain resources from multiple Azure regions.	●	○

Box 1: No -
A resource can interact with resources in other resource groups.

Box 2: Yes -
Deleting the resource group will remove the resource group as well as all the resources in that resource group. This can be useful for the management of resources. For example, a virtual machine has several components (the VM itself, virtual disks, network adapter etc.). By placing the VM in its own resource group, you can delete the VM along with all its associated components by deleting the resource group.
Another example is when creating a test environment. You could place the entire test environment (Network components, virtual machines etc.) in one resource group. You can then delete the entire test environment by deleting the resource group.

Box 3: Yes -
Resources from multiple different regions can be placed in a resource group. The resource group only contains metadata about the resources it contains.

Question #156

You plan to store 20 TB of data in Azure. The data will be accessed infrequently and visualized by using Microsoft Power BI.
You need to recommend a storage solution for the data.
Which two solutions should you recommend? Each correct answer presents a complete solution.
NOTE: Each correct selection is worth one point.

A Azure Data Lake Most Voted

B Azure Cosmos DB

C Azure SQL Data Warehouse Most Voted

D Azure SQL Database

E Azure Database for PostgreSQL

Correct Answer:
AC
You can use Power BI to analyze and visualize

data stored in Azure Data Lake and Azure SQL Data Warehouse.
Azure Data Lake includes all of the capabilities required to make it easy for developers, data scientists and analysts to store data of any size and shape and at any speed, and do all types of processing and analytics across platforms and languages. It removes the complexities of ingesting and storing all your data while making it faster to get up and running with batch, streaming and interactive analytics. It also integrates seamlessly with operational stores and data warehouses so that you can extend current data applications.

Question #157

HOTSPOT -
You have an Azure environment that contains 10 web apps.
To which URL should you connect to manage all the Azure resources? To answer, select the appropriate options in the answer area.
NOTE: Each correct selection is worth one point.

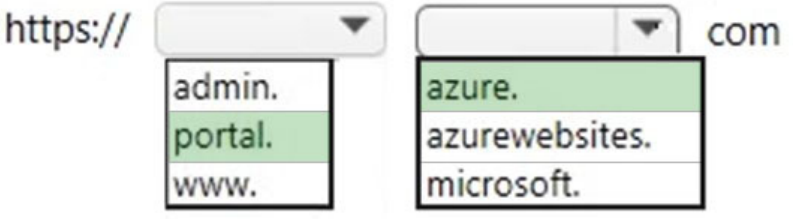

Hot Area:

Answer Area

Correct Answer:

Answer Area

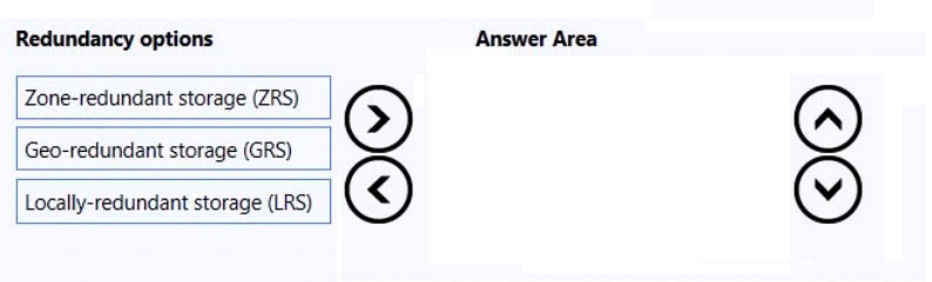

The Azure portal is a web-based management interface where you can view and manage all your Azure resources in one unified hub, including web apps, databases, virtual machines, virtual networks, storage and Visual Studio team projects.
The URL of the Azure portal is https://portal.azure.com.

Question #160

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution. After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

An Azure administrator plans to run a PowerShell script that creates Azure resources.

You need to recommend which computer configuration to use to run the script.
Solution: Run the script from a computer that runs Linux and has the Azure CLI tools installed.
Does this meet the goal?

A Yes

B No

Correct Answer:
B
A PowerShell script is a file that contains PowerShell cmdlets and code. A PowerShell script needs to be run in PowerShell.
PowerShell can now be installed on Linux.
However, the question states that the computer has Azure CLI tools, not PowerShell installed.
Therefore, this solution does not meet the goal.
