Question 36 Share

Question #171

Your company plans to deploy several million sensors that will upload data to Azure.
You need to identify which Azure resources must be created to support the planned solution.
Which two Azure resources should you identify? Each correct answer presents part of the solution.
NOTE: Each correct selection is worth one point.

A Azure Data Lake **Most Voted**

B Azure Queue storage

C Azure File Storage

D Azure IoT Hub **Most Voted**

E Azure Notification Hubs

Correct Answer:
AD
IoT Hub (Internet of things Hub) provides data from millions of sensors.
IoT Hub is a managed service, hosted in the cloud, that acts as a central message hub for bi-directional communication between your IoT application and the devices it manages. You can use Azure IoT Hub to build IoT solutions with reliable and secure communications between millions of IoT devices and a cloud- hosted solution backend. You can connect virtually any device to IoT Hub.
There are two storage services IoT Hub can route messages to -- Azure Blob Storage and Azure Data Lake Storage Gen2 (ADLS Gen2) accounts. Azure Data
Lake Storage accounts are hierarchical namespace-enabled storage accounts built on top of blob storage. Both of these use blobs for their storage.

Question #172

You have an Azure web app.
You need to manage the settings of the web app from an iPhone.
What are two Azure management tools that you can use?
Each correct answer presents a complete solution.
NOTE: Each correct selection is worth one point.

A Azure CLI

B the Azure portal

C Azure Cloud Shell

D Windows PowerShell

E Azure Storage Explorer

Correct Answer:
BC
The Azure portal is the web-based portal for managing Azure. Being web-based, you can use the Azure portal on an iPhone.
Azure Cloud Shell is a web-based command line for managing Azure. You access the Azure Cloud Shell from the Azure portal. Being web-based, you can use the
Azure Cloud Shell on an iPhone.
Incorrect Answers:
A: Azure CLI can be installed on MacOS but it cannot be installed on an iPhone.

D: Windows PowerShell can be installed on MacOS but it cannot be installed on an iPhone.
E: Azure Storage Explorer is not used to manage Azure web apps.

Question #173

Your company plans to deploy an Artificial Intelligence (AI) solution in Azure.
What should the company use to build, test, and deploy predictive analytics solutions?

A Azure Logic Apps

B Azure Machine Learning Designer Most Voted

C Azure Batch

D Azure Cosmos DB

Correct Answer:
B
Azure Machine Learning designer lets you visually

connect datasets and modules on an interactive canvas to create machine learning models.
Reference:
https://docs.microsoft.com/en-us/azure/machine-learning/concept-designer

Question #174

HOTSPOT -
For each of the following statements, select Yes if the statement is true. Otherwise, select No.
NOTE: Each correct selection is worth one point.
Hot Area:

Answer Area

Statements	Yes	No
Azure Advisor can generate a list of Azure virtual machines that are protected by Azure Backup.	◯	◯
If you implement the security recommendations provided by Azure Advisor, your company's secure score will decrease.	◯	◯
To maintain Microsoft support, you must implement the security recommendations provided by Azure Advisor within a period of 30 days.	◯	◯

Correct Answer:

Answer Area

Statements	Yes	No
Azure Advisor can generate a list of Azure virtual machines that are protected by Azure Backup.	○	●
If you implement the security recommendations provided by Azure Advisor, your company's secure score will decrease.	○	●
To maintain Microsoft support, you must implement the security recommendations provided by Azure Advisor within a period of 30 days.	○	●

Box 1: No -
Azure Advisor does not generate a list of virtual machines that ARE protected by Azure Backup. Azure Advisor does however, generate a list of virtual that ARE
NOT protected by Azure Backup. You can view a list of virtual machines that are protected by Azure Backup by viewing the Protected Items in the Azure Recovery
Services Vault.

Box 2: No -
If you implement the security recommendations, you company's score will increase, not decrease.

Box 3: No -
There is no requirement to implement the security recommendations provided by Azure Advisor. The recommendations are just that, 'recommendations'. They are not 'requirements'.

Question #176

DRAG DROP -
Match the Azure services to the correct descriptions.
Instructions: To answer, drag the appropriate Azure service from the column on the left to its description on the right.
Each service may be used once, more than once, or not at all.
NOTE: Each correct match is worth one point
Select and Place:

Correct Answer:

Box 1: Azure SQL Synapse Analytics
Azure SQL Synapse Analytics (previously called Data Warehouse) is a cloud-based Platform-as-a-Service (PaaS) offering from Microsoft. It is a large-scale, distributed, MPP (massively parallel processing) relational database technology in the same class of competitors as Amazon Redshift or Snowflake. Azure SQL
Synapse Analytics is an important component of the Modern Data Warehouse multi-platform architecture. Because Azure SQL Synapse

Analytics is an MPP system with a shared-nothing architecture across distributions, it is meant for large-scale analytical workloads which can take advantage of parallelism.
Box 2:
Azure Machine Learning uses past trainings to provide predictions that have high probability.
Machine learning is a data science technique that allows computers to use existing data to forecast future behaviors, outcomes, and trends. By using machine learning, computers learn without being explicitly programmed.
Forecasts or predictions from machine learning can make apps and devices smarter. For example, when you shop online, machine learning helps recommend other products you might want based on what you've bought.
Box 3:
Azure Functions provides serverless computing functionalities.
Azure Functions is a serverless compute service that lets you run event-triggered code without having to explicitly provision or manage infrastructure.
Box 4:
IoT Hub (Internet of things Hub) provides data from millions of sensors.
IoT Hub is a managed service, hosted in the cloud, that acts as a central message hub for bi-directional communication between your IoT application and the devices it manages. You can use Azure IoT Hub to build IoT solutions with reliable and secure communications between millions of IoT devices and a cloud- hosted solution backend. You can connect virtually any device to IoT Hub.

Question 17 Share

Question #177

You have an Azure environment.
You need to create a new Azure virtual machine from a tablet that runs the Android operating system.
What are three possible solutions? Each correct answer presents a complete solution.
NOTE: Each correct selection is worth one point.

A Use Bash in Azure Cloud Shell. Most Voted

B Use PowerShell in Azure Cloud Shell. Most Voted

C Use the PowerApps portal.

D Use the Security & Compliance admin center.

E Use the Azure portal. Most Voted

Correct Answer:
ABE
The Android tablet device will have a web browser (Chrome). That's enough to connect to the Azure portal.
The Azure portal offers three ways to create a VM:
☞ Using the graphical portal.
☞ Using the Azure Cloud Shell using Bash.
☞ Using the Azure Cloud Shell using PowerShell.

Question 16 Share

Question #178

A team of developers at your company plans to deploy, and then remove, 50 virtual machines each week. All the virtual machines are configured by using Azure
Resource Manager templates.
You need to recommend which Azure service will minimize the administrative effort required to deploy and remove the virtual machines.
What should you recommend?

A Azure Reserved Virtual Machine (VM) Instances

B Azure DevTest Labs Most Voted

C Azure virtual machine scale sets

D Azure Virtual Desktop

Correct Answer:
B
DevTest Labs creates labs consisting of pre-configured bases or Azure Resource Manager templates.
By using DevTest Labs, you can test the latest versions of your applications by doing the following tasks:
☞ Quickly provision Windows and Linux environments by using reusable templates and artifacts.
☞ Easily integrate your deployment pipeline with DevTest Labs to provision on-demand environments.
☞ Scale up your load testing by provisioning multiple test agents and create pre-provisioned environments for training and demos.

Question #179

HOTSPOT -
For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.
Hot Area:

Answer Area

Statements	Yes	No
Azure Advisor provides recommendations on how to improve the security of an Azure Active Directory (Azure AD) environment.	◯	◯
Azure Advisor provides recommendations on how to reduce the cost of running Azure virtual machines.	◯	◯
Azure Advisor provides recommendations on how to configure the network settings on Azure virtual machines.	◯	◯

Correct Answer:

Answer Area

Statements	Yes	No
Azure Advisor provides recommendations on how to improve the security of an Azure Active Directory (Azure AD) environment.	◯	◉
Azure Advisor provides recommendations on how to reduce the cost of running Azure virtual machines.	◉	◯
Azure Advisor provides recommendations on how to configure the network settings on Azure virtual machines.	◯	◉

Box 1: No -
Azure Advisor provides you with a consistent, consolidated view of recommendations for all your Azure resources. It integrates with Azure Security Center to bring you security recommendations. You can get security recommendations from the

Security tab on the Advisor dashboard. Examples of recommendations include restricting access to virtual machines by configuring Network Security Groups, enabling storage encryption, installing vulnerability assessment solutions.
However, Azure Advisor does not provide recommendations on how to improve the security of an Azure AD environment.

Box 2: Yes -
Advisor helps you optimize and reduce your overall Azure spend by identifying idle and underutilized resources. You can get cost recommendations from the Cost tab on the Advisor dashboard.
Box 3: No.
Azure Advisor does not provide recommendations on how to configure network settings on Azure virtual machines.

Q uestion 28 Share

Question #180

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct

solution, while others might not have a correct solution. After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have an Azure subscription named Subscription1. You sign in to the Azure portal and create a resource group named RG1.

From Azure documentation, you have the following command that creates a virtual machine named VM1. az vm create --resource-group RG1 --name VM1 --image UbuntuLTS --generate-ssh-keys

You need to create VM1 in Subscription1 by using the command.

Solution: From the Azure portal, launch Azure Cloud Shell and select PowerShell. Run the command in Cloud Shell.

Does this meet the goal?

A Yes

B No **Most Voted**

Correct Answer:
A

The command can be run in the Azure Cloud Shell. Although this question says you select PowerShell rather than Bash, the Az commands will work in PowerShell.

The Azure Cloud Shell is a free interactive shell. It has common Azure tools preinstalled and configured to use with your account.

To open the Cloud Shell, just select Try it from the upper right corner of a code block. You can also launch Cloud Shell in a separate browser tab by going to https://shell.azure.com/bash.
