Question 15 Share

Question #201

A support engineer plans to perform several Azure management tasks by using the Azure CLI.
You install the CLI on a computer.
You need to tell the support engineer which tools to use to run the CLI.
Which two tools should you instruct the support engineer to use? Each correct answer presents a complete solution.
NOTE: Each correct selection is worth one point.

A Command Prompt **Most Voted**

B Azure Resource Explorer

C Windows PowerShell **Most Voted**

D Windows Defender Firewall

E Network and Sharing Center

Correct Answer:
AC
For Windows the Azure CLI is installed via an MSI, which gives you access to the CLI through the Windows Command Prompt (CMD) or PowerShell.
References:
https://docs.microsoft.com/en-us/cli/azure/install-azure-cli-windows?view=azure-cli-latest

Question 19 Share

Question #202

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.
After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.
You have an Azure environment. You need to create a new Azure virtual machine from a tablet that runs the Android operating system.
Solution: You use PowerShell in Azure Cloud Shell.
Does this meet the goal?

A Yes **Most Voted**

B No

Correct Answer:
A
Azure Cloud Shell is a browser-based shell experience to manage and develop Azure resources.
Cloud Shell offers a browser-accessible, pre-configured shell experience for managing Azure resources without the overhead of installing, versioning, and maintaining a machine yourself.
Being browser-based, Azure Cloud Shell can be run on a browser from a tablet that runs the Android operating system.

Question #203

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct

solution, while others might not have a correct solution. After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.
You have an Azure environment. You need to create a new Azure virtual machine from a tablet that runs the Android operating system.
Solution: You use the PowerApps portal.
Does this meet the goal?

A Yes

B No **Most Voted**

Correct Answer:
B
PowerApps lets you quickly build business applications with little or no code. It is not used to create Azure virtual machines. Therefore, this solution does not meet the goal.
PowerApps Portals allow organizations to create websites which can be shared with users external to their organization either anonymously or through the login provider of their choice like LinkedIn, Microsoft Account, other commercial login providers.

Question #204

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.
After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.
You have an Azure environment. You need to create a new Azure virtual machine from a tablet that runs the Android operating system.
Solution: You use the Azure portal.
Does this meet the goal?

A Yes Most Voted

B No

Correct Answer:
A
The Azure portal is a web-based, unified console that provides an alternative to command-line tools. With the Azure portal, you can manage your Azure subscription using a graphical user interface. You can build, manage, and monitor everything from simple web apps to complex cloud deployments.

Create custom dashboards for an organized view of resources. Configure accessibility options for an optimal experience.
Being web-based, the Azure portal can be run on a browser from a tablet that runs the Android operating system.

Question #205

HOTSPOT -
Select the answer that correctly completes the sentence.
Hot Area:

The Microsoft 365 Compliance admin center The Microsoft 365 Defender portal Microsoft Defender for Cloud in the Azure portal Microsoft Trust Center	provides in-depth information about security, privacy, compliance offerings, policies, and features across Microsoft cloud products.

Correct Answer:

The Microsoft 365 Compliance admin center The Microsoft 365 Defender portal Microsoft Defender for Cloud in the Azure portal Microsoft Trust Center	provides in-depth information about security, privacy, compliance offerings, policies, and features across Microsoft cloud products.

Microsoft 365 compliance is now called Microsoft Purview and the solutions within the compliance area have been rebranded.
When you first visit the compliance portal, the card

section on the home page shows you at a glance how your organization is doing with data compliance, what solutions are available for your organization, and a summary of any active alerts.
From here, you can:
* Review the Microsoft Purview Compliance Manager card, which leads you to the Compliance Manager solution. Compliance Manager helps simplify the way you manage compliance.
* Review the new Solution catalog card, which links to collections of integrated solutions you can use to help you manage end-to-end compliance scenarios. A solution's capabilities and tools might include a combination of policies, alerts, reports, and more.
* Review the Active alerts card, which includes a summary of the most active alerts and includes a link where you can view more detailed information, such as
Severity, Status, Category, and more.

Question #206

HOTSPOT -
Select the answer that correctly completes the sentence.

Hot Area:

Correct Answer:

Azure Arc simplifies governance and management by delivering a consistent multi-cloud and on-premises management platform.
Azure Arc provides a centralized, unified way to:
Manage your entire environment together by projecting your existing non-Azure and/or on-premises resources into Azure Resource Manager.
Manage virtual machines, Kubernetes clusters, and databases as if they are running in Azure.
Etc.
Incorrect:
* Why use Azure AD Connect?
Integrating your on-premises directories with Azure AD makes your users more productive by providing a common identity for accessing both cloud and on-premises resources. Users and organizations can take advantage of:
Users can use a single identity to access on-premises applications and cloud services such as Microsoft 365.
Single tool to provide an easy deployment experience for synchronization and sign-in.
Provides the newest capabilities for your scenarios.
Azure AD Connect replaces older versions of identity integration tools such as DirSync and Azure

AD Sync.
* VPN Gateway sends encrypted traffic between an Azure virtual network and an on-premises location over the public Internet. You can also use VPN Gateway to send encrypted traffic between Azure virtual networks over the Microsoft network. A VPN gateway is a specific type of virtual network gateway.
* Pipeline agent is machine where your build is performed. An agent is installable software that runs one job at a time. Agent job is a set of steps which is recognized as execution boundary. Each job runs on an agent. All of the steps run together on the same agent.

Question #207

HOTSPOT -
For each of the following statements, select Yes if the statement is true. Otherwise, select No.
NOTE: Each correct selection is worth one point.
Hot Area:

Statements	Yes	No
You can only manage cloud services from Windows devices.	○	○
You can manage cloud services from the command line.	○	○
You can manage cloud services by using a web browser.	○	○

Correct Answer:

Box 1: No -
Easily manage your Azure storage accounts in the cloud, from Windows, macOS, or Linux, using Azure Storage Explorer.

Box 2: Yes -
Azure cloud services can be managed in Azure Automation by using the PowerShell cmdlets that are available in the Azure PowerShell tools.

Box 3: Yes -
Reference:
https://azure.microsoft.com/en-us/features/storage-explorer/
https://docs.microsoft.com/en-us/azure/cloud-services/automation-manage-cloud-services

Question #209

HOTSPOT -
For each of the following statements, select Yes if the statement is true. Otherwise, select No.
NOTE: Each correct selection is worth one point.
Hot Area:

Answer Area

Statements	Yes	No
Azure Monitor can monitor the performance of on-premises computers.	○	○
Azure Monitor can send alerts to Azure Active Directory security groups.	○	○
Azure Monitor can trigger alerts based on data in an Azure Log Analytics workspace.	○	○

Correct Answer:

Answer Area

Statements	Yes	No
Azure Monitor can monitor the performance of on-premises computers.	○	○
Azure Monitor can send alerts to Azure Active Directory security groups.	○	○
Azure Monitor can trigger alerts based on data in an Azure Log Analytics workspace.	○	○

Box 1: Yes -
Azure Monitor maximizes the availability and performance of your applications and services by delivering a comprehensive solution for collecting, analyzing, and acting on telemetry from your cloud and on-premises environments.

Box 2: Yes -
Alerts in Azure Monitor proactively notify you of critical conditions and potentially attempt to take corrective action.

Box 3: Yes -
Azure Monitor uses Target Resource, which is the scope and signals available for alerting. A target can be any Azure resource. Example targets: a virtual machine, a storage account, a virtual machine scale set, a Log Analytics workspace, or an Application Insights resource.

Question #210

Which Azure service provides a set of version control tools to manage code?

A Azure Repos Most Voted

B Azure DevTest Labs

C Azure Storage

D Azure Cosmos DB

Correct Answer:
A
Azure Repos is a set of version control tools that you can use to manage your code.
Incorrect Answers:
B: Azure DevTest Labs creates labs consisting of pre-configured bases or Azure Resource Manager templates. These have all the necessary tools and software that you can use to create environments.
D: Azure Cosmos DB is Microsoft's globally distributed, multi-model database service.
