Question #221

HOTSPOT -
For each of the following statements, select Yes if the statement is true. Otherwise, select No.
NOTE: Each correct selection is worth one point.
Hot Area:

Answer Area

Statements	Yes	No
Azure Firewall will encrypt all the network traffic sent from Azure to the Internet.	○	○
A network security group (NSG) will encrypt all the network traffic sent from Azure to the Internet.	○	○
Azure virtual machines that run Windows Server 2016 can encrypt network traffic sent to the Internet.	○	○

Correct Answer:

Answer Area

Statements	Yes	No
Azure Firewall will encrypt all the network traffic sent from Azure to the Internet.	○	○
A network security group (NSG) will encrypt all the network traffic sent from Azure to the Internet.	○	○
Azure virtual machines that run Windows Server 2016 can encrypt network traffic sent to the Internet.	○	○

Box 1: No -
Azure firewall does not encrypt network traffic. It is used to block or allow traffic based on source/destination IP address, source/destination ports and protocol.

Box 2: No -
A network security group does not encrypt network traffic. It works in a similar way to a firewall in that it is used to block or allow traffic based on source/ destination IP address, source/destination ports and protocol.

Box 3: No -
The question is rather vague as it would depend on the configuration of the host on the Internet.
Windows Server does come with a VPN client and it also supports other encryption methods such IPSec encryption or SSL/TLS so it could encrypt the traffic if the Internet host was configured to require or accept the encryption.
However, the VM could not encrypt the traffic to an Internet host that is not configured to require the encryption.

Question #222

HOTSPOT -
For each of the following statements, select Yes if the statement is true. Otherwise, select No.
NOTE: Each correct selection is worth one point.
Hot Area:

Answer Area

Statements	Yes	No
Azure Security Center can monitor Azure resources and on-premises resources.	○	○
All Azure Security Center features are free.	○	○
From Azure Security Center, you can download a Regulatory Compliance report.	○	○

Correct Answer:

Answer Area

Statements	Yes	No
Azure Security Center can monitor Azure resources and on-premises resources.	○	○
All Azure Security Center features are free.	○	○
From Azure Security Center, you can download a Regulatory Compliance report.	○	○

Box 1: Yes -
Azure Security Center is a unified infrastructure security management system that strengthens the security posture of your data centers, and provides advanced threat protection across your hybrid workloads in the cloud - whether they're in Azure or not - as well as on premises.

Box 2: No -
Only two features: Continuous assessment and security recommendations, and Azure secure

score, are free.

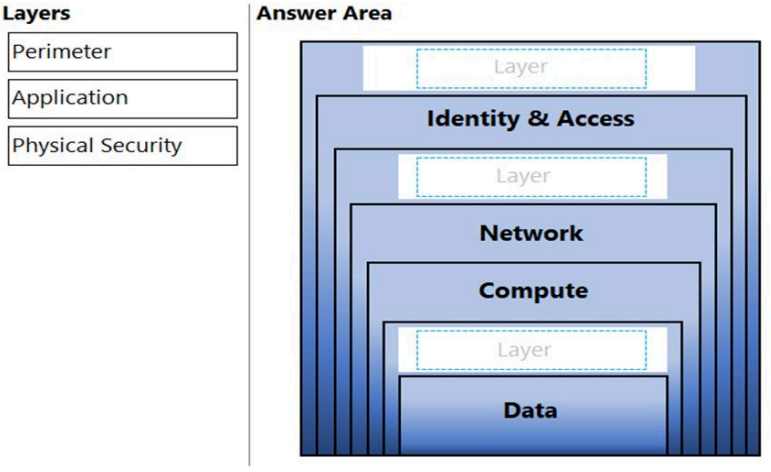

Box 3: Yes -
The advanced monitoring capabilities in Security Center also let you track and manage compliance and governance over time. The overall compliance provides you with a measure of how much your subscriptions are compliant with policies associated with your workload.

Question #223

DRAG DROP -
You need to complete the defense-in-depth strategy used in a datacenter.
What should you do? To answer, drag the appropriate layers to the correct positions in the model. Each layer may be used once, more than once, or not at all.
You may need to drag the split bar between panes or scroll to view content.
NOTE: Each correct selection is worth one point.
Select and Place:

Correct Answer:

Defence in depth layers (from bottom to top):
☞ Data
- In almost all cases attackers are after data.
- Data can be in database, stored on disk inside VMs, on a SaaS application such as Office 365 or in cloud storage.
- Those storing and controlling access to data to ensures that it's properly secured
- Often regulatory requirements dictates controls & processes
- to ensure confidentiality, integrity, and availability.
☞ Application
- Ensure applications are secure and free of vulnerabilities.
- Store sensitive application secrets in a secure storage medium.
- Make security a design requirement for all application development.
- Integrate security into the application development life cycle.
☞ Compute
- Secure access to virtual machines.
- Implement endpoint protection and keep systems patched and current.
- Malware, unpatched systems, and improperly secured systems open your environment to attacks.
☞ Networking
- Limit communication between resources.
- Deny by default.
- Allow only what is required

- Restrict inbound internet access and limit outbound, where appropriate.
- Implement secure connectivity to on-premises networks.

☞ Perimeter

- Use distributed denial of service (DDoS) protection to filter large-scale attacks before they can cause a denial of service for end users.
- Use perimeter firewalls to identify and alert on malicious attacks against your network.

☞ Identity and access

- Control access to infrastructure and change control.
- Access granted is only what is needed
- Use single sign-on and multi-factor authentication.
- Audit events and changes.

☞ Physical security

- Building security & controlling access to computing hardware.
- First line of defense.

Question #224

You have an Azure virtual machine named VM1.
You plan to encrypt VM1 by using Azure Disk Encryption.
Which Azure resource must you create first?

A an Azure Storage account

B an Azure Key Vault Most Voted

C an Azure Information Protection policy

D an Encryption key

Correct Answer:
B
Azure Disk Encryption requires an Azure Key Vault to control and manage disk encryption keys and secrets.

Question #225

Which resources can be used as a source for a Network security group inbound security rule?

A Service Tags only

B IP Addresses, Service tags and Application security groups Most Voted

C Application security groups only

D IP Addresses only

Correct Answer:
B
Source or destination:

Any, or an individual IP address, classless inter-domain routing (CIDR) block (10.0.0.0/24, for example), service tag, or application security group.
Reference:
https://docs.microsoft.com/en-us/azure/virtual-network/network-security-groups-overview

Question #226

HOTSPOT -
To complete the sentence, select the appropriate option in the answer area.
Hot Area:

Answer Area

Azure Sentinel uses playbooks to

- automatically respond to threats.
- collect data from Azure services.
- specify how long data is retained.
- store passwords and certificates.

Correct Answer:

Answer Area

Azure Sentinel uses playbooks to

- automatically respond to threats.
- collect data from Azure services.
- specify how long data is retained.
- store passwords and certificates.

Question #227

HOTSPOT -
To complete the sentence, select the appropriate option in the answer area.
Hot Area:

Answer Area

[ ] in Azure Firewall enables users on the internet to access a server on a virtual network.

- Application rules
- Network Address Translation (NAT) rules
- Network rules
- Service tags

Correct Answer:

Answer Area

[Network Address Translation (NAT) rules] in Azure Firewall enables users on the internet to access a server on a virtual network.

Question #228

HOTSPOT -

Select the answer that correctly completes the sentence.

Answer Area

A cloud service that supports a maximum of 20 instances is more [ ] than a service that supports a maximum of five instances

- distributed
- scalable
- secure

Correct Answer:

Answer Area

A cloud service that supports a maximum of 20 instances is more [▼] than a service that supports a maximum of five instances

distributed
scalable
secure

Question #230

HOTSPOT -

Select the answer that correctly completes the sentence.

Answer Area

You can assign a [ ] to every Azure resource.

- blueprint
- lock
- policy
- service endpoint

Correct Answer:

Answer Area

You can assign a [lock] to every Azure resource.

- blueprint
- lock
- policy
- service endpoint
