Question 16 Share

## Question #51

In which type of cloud model are all the hardware resources owned by a third-party and shared between multiple tenants?

A private

B hybrid

C public **Most Voted**

**Correct Answer:**
C
Microsoft Azure, Amazon Web Services and

Google Cloud are three examples of public cloud services.
Microsoft, Amazon and Google own the hardware.
The tenants are the customers who use the public cloud services.

Question 23 Share

## Question #52

You have 1,000 virtual machines hosted on the Hyper-V hosts in a data center.
You plan to migrate all the virtual machines to an Azure pay-as-you-go subscription.
You need to identify which expenditure model to use for the planned Azure solution.
Which expenditure model should you identify?

A operational Most Voted

B elastic

C capital

D scalable

**Correct Answer:**
A

One of the major changes that you will face when you move from on-premises cloud to the public cloud is the switch from capital expenditure (buying hardware) to operating expenditure (paying for service as you use it). This switch also requires more careful management of your costs. The benefit of the cloud is that you can fundamentally and positively affect the cost of a service you use by merely shutting down or resizing it when it's not needed.

## Question #53

DRAG DROP -
Match the Azure services benefits to the correct descriptions.
Instructions: To answer, drag the appropriate benefit from the column on the left to its description on the right. Each benefit may be used once, more than once, or not at all.
NOTE: Each correct match is worth one point.

Select and Place:

## Correct Answer:

Box 1:
Fault tolerance is the ability of a service to remain available after a failure of one of the components of the service. For example, a service running on multiple servers can withstand the failure of one of the servers.

Box 2:
Disaster recovery is the recovery of a service after a failure. For example, restoring a virtual machine from backup after a virtual machine failure.

Box 3:
Dynamic scalability is the ability for compute resources to be added to a service when the service is under heavy load. For example, in a virtual machine scale set, additional instances of the virtual machine are added when the existing virtual machines are under heavy load.

Box 4:
Latency is the time a service to respond to requests. For example, the time it takes for a web

page to be returned from a web server. Low latency means low response time which means a quicker response.

## Question #54

HOTSPOT -
For each of the following statements, select Yes if the statement is true. Otherwise, select No.
NOTE: Each correct selection is worth one point.

Hot Area:

**Answer Area**

| Statements | Yes | No |
|---|---|---|
| To implement a hybrid cloud model, a company must have an internal network. | ○ | ○ |
| A company can extend the computing resources of its internal network by using a hybrid cloud. | ○ | ○ |
| In a public cloud model, only guest users at your company can access the resources in the cloud. | ○ | ○ |

**Correct Answer:**

**Answer Area**

| Statements | Yes | No |
|---|---|---|
| To implement a hybrid cloud model, a company must have an internal network. | ○ | ● |
| A company can extend the computing resources of its internal network by using a hybrid cloud. | ● | ○ |
| In a public cloud model, only guest users at your company can access the resources in the cloud. | ○ | ● |

Box 1: No -
It is not true that a company must always migrate from an internal network to implement a hybrid cloud. You could start with a public cloud and then combine that with an on-premise infrastructure to implement a hybrid cloud.

Box 2: Yes -
A company can extend the computing resources of its internal network by using the public cloud. This is very common. When you need more resources,

rather than pay out for new on-premises infrastructure, you can configure a cloud environment and connect your on-premises network to the cloud environment by using a VPN.

Box 3: No -
It is not true that only guest users can access cloud resources. You can give anyone with an account in Azure Active Directory access to the cloud resources.
There are many authentication scenarios but a common one is to replicate your on-premises Active Directory accounts to Azure Active Directory and provide access to the Azure Active Directory accounts. Another commonly used authentication method is 'Federation' where authentication for access to cloud resources is passed to another authentication provider such as an on-premises Active Directory.

## Question #55

HOTSPOT -
For each of the following statements, select Yes if the statement is true. Otherwise, select No.
NOTE: Each correct selection is worth one point.

Hot Area:

**Answer Area**

| Statements | Yes | No |
|---|---|---|
| A Platform as a Service (PaaS) solution provides full control of operating systems that host applications. | ○ | ○ |
| A Platform as a Service (PaaS) solution provides additional memory to apps by changing pricing tiers. | ○ | ○ |
| A Platform as a Service (PaaS) solution can automatically scale the number of instances. | ○ | ○ |

**Correct Answer:**

**Answer Area**

| Statements | Yes | No |
|---|---|---|
| A Platform as a Service (PaaS) solution provides full control of operating systems that host applications. | ○ | ◯ |
| A Platform as a Service (PaaS) solution provides additional memory to apps by changing pricing tiers. | ○ | ◯ |
| A Platform as a Service (PaaS) solution can automatically scale the number of instances. | ◯ | ○ |

## Question #56

Your company has an on-premises network that contains multiple servers.
The company plans to reduce the following administrative responsibilities:
➪ Backing up application data
➪ Replacing failed server hardware

☞ Managing physical server security
☞ Updating server operating systems
☞ Managing permissions to shared documents

The company plans to migrate servers to Azure virtual machines.

You need to identify which administrative responsibilities will be eliminated after the planned migration.

Which two responsibilities should you identify? Each correct answer presents a complete solution.

NOTE: Each correct selection is worth one point.

A Replacing failed server hardware **Most Voted**

B Backing up application data

C Managing physical server security

D Updating server operating systems

E Managing permissions to shared documents

**Correct Answer:**
AC

Azure virtual machines run on Hyper-V physical servers. The physical servers are owned and managed by Microsoft. As an Azure customer, you have no access to the physical servers. Microsoft manage the replacement of failed server hardware and the security of the physical servers so you don't need to.

Incorrect Answers:

B: Microsoft have no control over the applications you run on the virtual machines. Therefore, it is your responsibility to ensure that application data is

backed up.
D: Microsoft do not manage the operating systems you run on the virtual machines. Therefore, it is your responsibility to ensure that the operating systems are updated.
E: Microsoft have no control over the shared folders you host on the virtual machines. Therefore, it is your responsibility to ensure that folder permissions are configured appropriately.

## Question #57

HOTSPOT -
For each of the following statements, select Yes if the statement is true. Otherwise, select No.
NOTE: Each correct selection is worth one point.
Hot Area:

**Answer Area**

| Statements | Yes | No |
|---|---|---|
| Azure Pay-As-You-Go pricing is an example of CapEx. | ○ | ○ |
| Paying electricity for your datacenter is an example of OpEx. | ○ | ○ |
| Deploying your own datacenter is an example of CapEx. | ○ | ○ |

## Correct Answer:

**Answer Area**

| Statements | Yes | No |
|---|---|---|
| Azure Pay-As-You-Go pricing is an example of CapEx. | ○ | ● |
| Paying electricity for your datacenter is an example of OpEx. | ○ | ● |
| Deploying your own datacenter is an example of CapEx. | ● | ○ |

One of the major changes that you will face when you move from on-premises cloud to the public cloud is the switch from capital expenditure (buying hardware) to operating expenditure (paying for service as you use it).

Box 1: No -
With the pay-as-go model, you pay for services as you use them. This is Opex (Operational Expenditure), not CapEx (Captial Expenditure). CapEx is where you pay for something upfront. For example, buying a new physical server.

Box 2: No -
Paying for electricity for your own datacenter will be classed as CapEx, not OpEx.

Box 3: Yes -
Deploying your own datacenter is an example of CapEx. This is because you need to purchase all the infrastructure upfront before you can use it.

## Question #58

You plan to provision Infrastructure as a Service (IaaS) resources in Azure.
Which resource is an example of IaaS?

A an Azure web app

B an Azure virtual machine **Most Voted**

C an Azure logic app

D an Azure SQL database

**Correct Answer:**
B
An Azure virtual machine is an example of Infrastructure as a Service (IaaS).
Azure web app, Azure logic app and Azure SQL database are all examples of Platform as a Service (Paas).

Question 19 Share

## Question #59

To which cloud models can you deploy physical servers?

A private cloud and hybrid cloud only **Most Voted**

B private cloud only

C private cloud, hybrid cloud and public cloud

D hybrid cloud only

**Correct Answer:**
A
A private cloud is on-premises so you can deploy physical servers.
A hybrid cloud is a mix of on-premise and public cloud resources. You can deploy physical servers on-premises.

Question 16 Share

## Question #60

DRAG DROP -
Match the cloud model to the correct advantage.
Instructions: To answer, drag the appropriate cloud model from the column on the left to its advantage on the right.
Each cloud model may be used once, more than once, or not at all.
NOTE: Each correct match is worth one point
Select and Place:

| Cloud model | Work Area | |
|---|---|---|
| Hybrid Cloud | | No required capital expenditure. |
| Private Cloud | | Provides complete control over security. |
| Public Cloud | | Provides a choice to use on-premises or cloud-based resources. |

**Correct Answer:**

| Cloud model | Work Area | |
|---|---|---|
| Hybrid Cloud | Public Cloud | No required capital expenditure. |
| Private Cloud | Private Cloud | Provides complete control over security. |
| Public Cloud | Hybrid Cloud | Provides a choice to use on-premises or cloud-based resources. |

Box 1: Public Cloud -
With a public cloud, there is no capital expenditure on server hardware etc. You only pay for cloud resources that you use as you use them.

Box 2: Private Cloud -
A private cloud exists on premises, so you have complete control over security.

Box 3: Hybrid Cloud -
A hybrid cloud is a mix of public cloud resources and on-premises resources. Therefore, you have a choice to use either.
